LEED Preparation Course

Leadership in Energy and Environmental Design

April 17 - 22, 2021
Why learn about Leadership in Energy and Environmental Design (LEED)?

During this five-day course, participants will learn how to manage the LEED project process. This includes project demonstration requirements, project calculations and software tools. Students will also learn how to register a LEED project and submit LEED credits. The goal is to share knowledge needed to maximize building performance, achieve LEED certification and help prepare for LEED examinations.

Course Description:

Owners and developers are demanding green buildings to save money while protecting the environment and occupant’s health. LEED has already been adopted by the United States, Canada, Mexico, India and the Emirates Green Building Council. Whether you are a freelance designer or head of a multimillion dollar corporation, it is important to stay on top of the cutting-edge trends in your industry. In this economy, you can’t risk losing out on bids and potential business because you aren’t in the know. Having a LEED accredited professional on staff can be a highly marketable asset. Any company developing a corporate sustainability strategy or working on a LEED project should consider putting together a team of knowledgeable, experienced and certified individuals. The impact from a group of LEED professionals is far more profound than the impact of one person. This team will be able to make better green building decisions that will likely satisfy more people and yield better results for the company.

knowledge of mainstream BIM workflows, practices and processes in the fields of buildings and infrastructure projects.
Who should attend?

- Industry professionals who wish to become a LEED green associate
- Facility managers
- Building owners and end-users
- Developers
- Government agencies
- Architects
- Engineers
- Consultants
- Sustainability managers
- Construction managers
- Students
- Suppliers to the construction industry
- Project managers

Who should attend?

- Introduction to green building
- LEED and the LEED process
- Sustainable sites
- Water efficiency
- Energy and the atmosphere
- Materials and resources
- Indoor environmental quality
- Innovation in design
- Regional priority credits
- LEED Green Associate Exam tips
- Tips on how to pass the LEED Green Associate Exam

LEED: Leadership in Energy and Environmental Design (V4 GA) 24 hours (6 classes)

Duration: April 17 - 22, 2021

Time: 1:00 pm to 5:00 pm

Course location: Online course

Course fees: 4500 EGP for Egyptians, 9000 EGP for non-Egyptians

Instructors: Dr. Khaled Trabieh / Dr. Sherine Fahmy
