WHAT’S IN A RANKING?

1 WHAT ARE RANKINGS?
University rankings are a collection of indicators used to measure institutional quality. The indicators are diversified, based on a variety of information sources and sometimes weighed to provide meaningful results. Rankings are available for entire institutions, specific programs, departments and schools. The three most influential international university rankings are the QS World University Rankings, Times Higher Education (THE) World University Rankings and Academic Ranking of World Universities (ARWU).

2 WHAT IS THE FUNCTION OF RANKINGS?
A university’s ranking is used in institutional decision making and in marketing. It is a useful benchmark to guide students and parents as to what the leading universities are in different parts of the world and in specific subject areas. Rankings, when conducted properly, represent an indication of the quality of education within an institution.

3 WHAT IS THE RANKING THAT BEST DESCRIBES AUC?
Unlike other rankings that focus primarily on research output as a key metric for performance, QS measures universities across broad areas, namely research, teaching, employability, student learning, community engagement and innovation, and international outlook. These areas best describe AUC’s mission and measure its performance.

4 WHAT IS AUC’S RANK IN QS?
QS rankings only evaluate 900 universities around the world. In other words, only the top 3 to 5 percent of higher education institutions worldwide are included in global rankings. The highest rank AUC scored in the QS World University Rankings was 345 in 2015. In Egypt, AUC is the top-ranked and only private institution listed. In 2015 - 2016, AUC ranked fifth in the Arab region with an overall score of 90/100 in the regional ranking, which puts AUC in a very competitive position compared to other institutions in the region. AUC was also ranked the third best University in Africa in the same year.
